Vienna, 2019

'Erasmus+ Youth in Action' is part of the Erasmus+ Programme of the European Union and supporting European youth projects. The 'Research-based Analysis of Erasmus+ Youth in Action' (RAY) is conducted by the RAY Network, which includes the National Agencies of Erasmus+ Youth in Action and their research partners in 34 countries*.

This study presents a transnational analysis of the results from surveys between October 2017 and April 2018 with project participants and project leaders/team members involved in Erasmus+ Youth in Action projects. The study was designed and implemented by the Institute of Educational Science at the University of Innsbruck and the Generation and Educational Science Institute in Austria, under the research project direction of Helmut Fennes, in cooperation with the RAY Network and with technical assistance by Youth Policy Labs. It was co-funded within the Transnational Cooperation Activities (TCA) of Erasmus+ Youth in Action.

This report reflects the views only of its authors, and the European Commission cannot be held responsible for any use, which may be made of the information contained therein.

Where available, national research reports can be requested from the respective National Agencies and their research partners (see <http://www.researchyouth.eu/network>). Further RAY publications can be retrieved from <http://www.researchyouth.eu/research-results-publications>.

* 31 countries in 2017/2018: Austria, Belgium, Cyprus, Czechia, Croatia, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Turkey, United Kingdom. North Macedonia, Serbia and Switzerland joined in 2019.

Abbreviations and definitions

Abbreviations

E+	European Union Programme Erasmus+ (2014-2020)
E+/YiA	Erasmus+ Youth in Action (2014-2020)
EU	European Union
NA	National Agency
PL	Project leaders/members of project teams: Youth workers, youth leaders, trainers or other actors who prepared and implemented YiA projects for/with young people or youth workers/leaders, at least in an education/socio-pedagogic function, but frequently also with an organisational function; normally, in particular in the case of projects with participants from two or more different countries, these projects are prepared and implemented by project teams with two or more project leaders.
PP	Project participants
RAY	Research-based Analysis of Erasmus+ Youth in Action. The RAY Network consists of the Youth in Action National Agencies and their research partners involved in the RAY project.
YiA	European Union Programme ‘Youth in Action’ (2007-2013)
YPFO	Young people with fewer opportunities
YPSN	Young People with special needs

Activity types

EVS	European Voluntary Service (Key Action 1)
SD	Structured Dialogue – meetings between young people and decision-makers in the field of youth (Key Action 3). As of 2019, this activity type is called Youth Dialogue.
TCA	Transnational Cooperation Activities
YE	Youth Exchanges (Key Action 1)
YWM	Mobility of youth workers (Key Action 1)

Definitions

Activity start/end	the dates when, within a funded project, the core activity starts/ends, for example a youth exchange (when young people from different countries meet in one country), a seminar, a training course, etc.
Project start/end:	The dates when a funded project starts/ends; the duration of a project is normally much longer than that of the core activity (see activity start/end) – the project also includes the preparation of and the follow-up to the core activity; for example, a youth exchange project might have an activity duration of one week while the project duration might be three months or more.
Residence country	Country of residence at the beginning of the project (the country of the partner organisation that the participant was part of)
Funding country	Country in which a project was funded through the respective National Agency of E+/YiA
Venue country	Country in which one or more core activities within a project – in particular meetings of young people or of youth workers/leaders (in most cases from different countries of origin) – took place; also referred to as ‘hosting country’
Sending	This refers to PP or PL who came from a ‘sending’ partner, i.e., they went to another country for their project

Hosting This refers to PP or PL who came from a ‘hosting’ partner, i.e., they were involved in a project taking place in their country of residence

Countries

- | | |
|-----------------------------|---|
| E+/YiA Programme countries: | These are EU member states, EEA countries and EU candidate/acccession countries (for country codes/abbreviations see Table 2 in the accompanying Data Report). |
| E+/YiA Partner countries: | These are countries from Southeast Europe, countries from Eastern Europe and the Caucasus region as well as Mediterranean countries (for country codes/abbreviations see Table 3 in the accompanying Data Report). |
| RAY countries: | RAY Network members participating in these surveys as funding countries (Austria, Belgium, Bulgaria, the Czech Republic, Croatia, Denmark, Estonia, Finland, France, Germany, Hungary, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Turkey, United Kingdom). |

RAY Research Projects (2015-2018)

- | | |
|---------|--|
| RAY-CAP | A research project on <u>competence development and capacity building</u> of youth workers and youth leaders involved in training/support activities in Erasmus+ Youth in Action. 17 RAY Network members were involved in this project. |
| RAY-LTE | A research project on the <u>long-term effects of Erasmus+ Youth in Action on participation and citizenship</u> of the actors involved, in particular on the development of participation and citizenship competences and practices. 11 RAY Network members were involved in this project. |
| RAY-MON | <u>Research-based analysis and monitoring of Erasmus+ Youth in Action</u> aims to contribute to monitoring and developing Erasmus+ Youth in Action and the quality of projects supported by it. This activity is a joint activity of all RAY Network members. |

Key competences for lifelong learning

KC1	Communication in the mother tongue	KC6	Social and civic competences
KC2	Communication in foreign languages	KC6a	<i>Interpersonal and social competence</i>
KC3	Mathematical competence and basic competences in science and technology	KC6b	<i>Intercultural competence</i>
<i>KC3a</i>	<i>Mathematical competence</i>	KC6c	<i>Civic competence</i>
<i>KC3b</i>	<i>Basic competences in science and technology</i>	KC7	Sense of initiative and entrepreneurship
KC4	Digital competence	KC7a	<i>Sense of initiative</i>
KC5	Learning competence (learning to learn)	KC7b	<i>Sense of entrepreneurship</i>
		KC8	Cultural awareness and expression
		ML	Media literacy

The key competences were renewed in 2018. These are the key competences that were valid for the surveying period of 2017 covered by this report

1 Research Methodology

1.1 Research method and instruments

For this study, standardised multilingual online surveys with project participants and project leaders/team members were conducted. Based on concepts and research instruments designed by the Institute of Educational Science at the University of Innsbruck in Austria and further developed in cooperation with the Generation and Educational Science Institute in Austria and the RAY Network between 2009 and 2013, two multilingual online questionnaires – one for participants and one for project leaders/team members of E+/YiA-funded projects – were created, taking into account the experiences of the previous studies on YiA and adapting the questionnaires to the E+/YiA programme. Based on the analysis of the RAY monitoring surveys in 2015/16, the questionnaires were reviewed and slightly modified, leaving most of the questions and items unchanged, providing for a comparison between the three RAY monitoring survey cycles between 2015 and 2020, allowing to analyse the development of E+/YiA over the full programme period.

The questionnaires mainly consist of closed/multiple-choice questions and one open question at the end of the questionnaire. Both questionnaires include a number of dependency questions, which only appear for the respondents in the event a previous (filter) question was answered in a specific way.

Both questionnaires can be accessed in 26 languages: Bulgarian, Czech, Croatian, Danish, Dutch, English, Estonian, Finnish, French, German, Greek, Hungarian, Italian, Latvian, Lithuanian, Maltese, Norwegian, Polish, Portuguese, Romanian, Russian, Slovak, Slovene, Spanish, Swedish, Turkish.

1.2 Implementation of the surveys

The surveys addressed participants and project leaders/team members of projects funded by the E+/YiA Programme through the National Agencies of the RAY Network countries. The surveys covered the following types of projects/activities: Youth Exchanges (Key Action 1), European Voluntary Service (Key Action 1), Structured Dialogue – meetings between young people and decision-makers in the field of youth (Key Action 3), Mobility of Youth Workers (Key Action 1). Additionally, participants of international Transnational Cooperation Activities of the E+/YiA National Agencies were addressed. Strategic Partnerships were not invited to the surveys since the questionnaires were not sufficiently suitable for them, and a separate research project was envisaged for exploring them.

In principle, invitations to the surveys were sent to participants and project leaders/team members of projects with an activity end between two and eleven months before the invitation to take part in the survey.¹ The minimum of two months between the activity end and the survey was established in order to provide for responses after a phase of potentially strong emotions immediately after the project experience and after a period of potential reflection, thus making it possible to study sustainable effects of the involvement in the project.

For this study, participants and project leaders/team members of projects with an activity end between 1 January and 31 December 2017 were surveyed. In order to arrive at a sample with a

¹ The ‘activity end’ is the end of the core activity of a project (e.g., in the case of a youth exchange, a seminar, a training course, etc.); in the case of EVS projects, the departure date of the volunteer returning home was used as ‘activity end’; in case no ‘activity end’ was available, the ‘project end’ as specified in the grant agreement was used.

sufficient size to provide for meaningful results for each RAY Partner country and considering that the response rate in the past was around 30%, RAY Network Partners were requested, if possible, to provide the contact data of a minimum of 1,000 *participants* of projects ending in 2017 and funded by them.² Since the number of *project leaders/team members* is generally much smaller, RAY Network Partners were requested to provide the contact data of *all* project leaders/team members of *all* projects ending in 2017. If at all, RAY Network Partners should select *projects* to be surveyed, thus inviting 100% of participants/project leaders/team members of selected projects. Projects selected to be surveyed should be representative with respect to activity types, types of beneficiaries, the involvement of young people with fewer opportunities, duration, group size, age groups and living environment of participants (urban/rural).

Most of the contact data for this purpose was retrieved by the National Agencies of RAY Network Partners from the ‘Mobility Tool’, an online tool for recording data of project participants/leaders/team members (including names and e-mail addresses) to be entered by project beneficiaries and their partners and/or by the National Agency. The RAY research coordination treated this data confidentially and used it solely for inviting the addressees to the RAY online surveys.

Project participants and project leaders were invited by e-mail to complete the questionnaire with respect to a specific YiA-funded project they were involved in. The following information was included in the email invitation: the project title, the project dates, the project venue country and a URL with an individual token (password). This hyperlink allowed the participants and project team members to access the online questionnaire directly. The e-mail invitations were customised according to the official language(s) of the country of residence of the respective addressee, or in English in cases where the language was not available through the survey tool.³ The addressees were given around two weeks to complete the questionnaire. Two weeks after the initial invitation they received a reminder, which informed them that they had one to two more weeks to complete the questionnaire. Similarly, a second reminder was sent out two weeks later. To participants, a third reminder was sent out around one week later. Nevertheless, the questionnaire remained active (and the token/password remained valid) beyond that date until the survey was closed and the response data was exported in January respectively June 2018.

The surveys were implemented using an online survey platform (LimeSurvey⁴) which offers the necessary functionalities, in particular multilingual questionnaires with an option for filter questions and dependency questions and the possibility to invite/remind addressees directly through the online survey tool.

The surveys took place between October 2017 and May 2018. More than 86,000 project participants and more than 18,000 project leaders were invited to participate in these surveys.⁵ Close to 35,000 participants and 7,200 project leaders completed the online questionnaire. This would imply a response rate of 40% for the participants and of 39% for the project leaders, but many respondents left the questionnaire too early for relevant outcomes (see below).

A data cleaning procedure of the responses of participants carried out the following steps:

² This was not possible for smaller countries for which respective RAY Network Partners provided the contact data of as many participants as possible – ideally 100%.

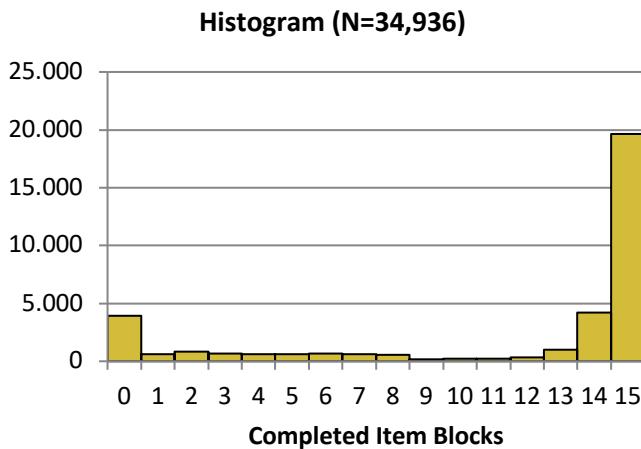

³ In particular, this was the case for participants from non-RAY Network countries.

⁴ <https://survey.limesurvey.org/>

⁵ Actually, e-mails were sent to 95,470 participants and to 19,365 project leaders/team members, but around 10% of the e-mails were returned (address not valid, mailbox over quota, etc.).

- deleting all cases of participants who worked on less than eleven of 15 pre-defined item-blocks containing items of high relevance for the analysis (see Figure 16⁶);
- deleting all cases with an activity end \leq 2 months or \geq 11 months before the questionnaire was completed;
- deleting all cases for which the age indicated by respondents did not comply with the funding criteria;⁷
- deleting all cases where the responses of participants concerning the activity type they were referring to in the questionnaire was not compatible with the activity type for which they were invited to complete the questionnaire; since a respondent could have participated in two youth projects during the previous months, the responses could distort analyses by activity types.⁸

Figure 16: Number of item-blocks in the questionnaire completed by project participants

A data cleaning procedure of the responses of project leaders/team members carried out the following steps:

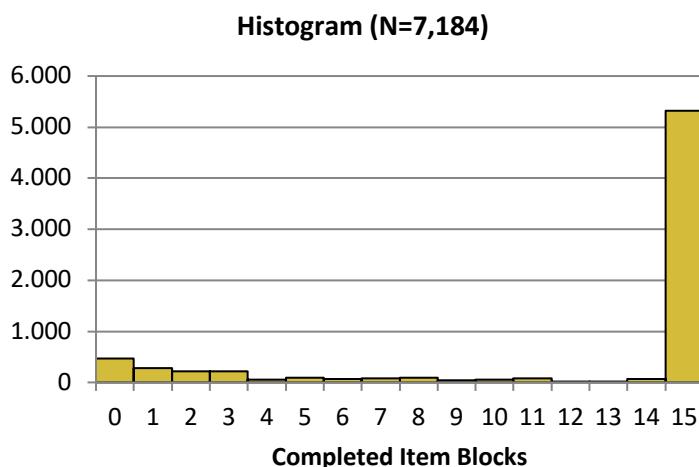

- deleting all cases of project leaders who worked on less than twelve of 15 pre-defined item-blocks containing items of high relevance for the analysis (see Figure 17⁹);
- deleting all cases with an activity end \leq 2 months or \geq 11 months before the questionnaire was completed;
- deleting all cases where the responses of project leaders/team members concerning the activity type they were referring to in the questionnaire was not compatible with the activity type for which they were invited to complete the questionnaire; since a project leader/team member could have been involved in two (or even more) youth projects during the previous months, the responses could distort analyses by activity types.

⁶ This is more rigid than applied for the surveys in 2015/16 – then all cases of participants who worked on less than seven of 15 item-blocks.

⁷ It is possible that these were actually project leaders/team members wrongly coded as participants.

⁸ Respondents also might have ticked responses on a random basis.

⁹ This is more rigid than applied for the surveys in 2015/16 – then all cases of project leaders who worked on less than seven of 15 item-blocks.

Figure 17: Number of item-blocks in the questionnaire completed by project leaders

Following this data cleaning procedure (referred to as ‘data cleaning/2’ in Table 1 below), 23,571 participant responses and 5,007 responses of project leaders/team members were used for this transnational analysis¹⁰, thus 27% of the participants and 27% of the project leaders/team members invited to these surveys.

For RAY Network Partners, a less rigid data cleaning procedure was conducted (referred to as ‘data cleaning/1’ in Table 1 below). In particular, only cases of participants who worked on less than four and project team members who worked on less than three of 15 pre-defined item-blocks containing items of high relevance for the analysis were deleted, and cases for which the questionnaire was completed more than 11 months after the activity end were *not* deleted. This provided for larger samples for the RAY Partner countries, which is important especially for small countries in order to arrive at meaningful results.

Table 1: Invitations to the surveys and response rates

	invitations sent	not delivered/ returned to sender	persons 'reached' e-mail not returned	total responses	% total responses	responses after data-cleaning/1	% after data cleaning/1	responses after data-cleaning/2	% after data cleaning/2
Participants	94,953	8,607	86,346	34,939	40%	27,008	31%	23,571	27%
Project leaders	19,236	676	18,560	7,184	39%	5,756	31%	5,007	27%
Total	114,189	9,283	104,906	42,123	40%	32,764	31%	28,578	27%

1.3 Samples

A total of 23,571 participants were included in the sample, of which 20,083 (85.5%) came from the 31 RAY countries and 3,408 (14.5%) from other countries (see Table 5). For participants in YE, YWM and TCA, the proportion of participants from the ‘sending’ countries was considerably higher than of those from the ‘hosting’ countries (77% to 83% vs. 17% to 24%), presumably caused by multilateral projects involving four or more countries per project. Almost all EVS participants

¹⁰ 16,373 participants and 2,951 project leaders were included in the sample for the transnational analysis of surveys in 2015/16. This shows that the samples have increased considerably in 2017/18.

were ‘sending’ participants, since EVS projects are, in general, ‘sending’ projects. 75% of SD participants were ‘hosting’ participants (see Table 9), reflecting that SD projects involve considerably more ‘hosting’ participants than ‘sending’ participants.

A total of 5,007 project leaders/team members were included in the sample, of which 4,964 come from the 31 RAY countries and 602 (12.1%) from other countries (see Table 11). Also in this case, the number of project leaders from ‘sending’ countries was higher than those from ‘hosting’ countries, although the ratio is different in average (from that for participants) and also by activity types: there are more ‘hosting’ than ‘sending’ project leaders in YWM projects, which suggests that for these projects the hosting organisations are more dominant. There are also relatively more ‘hosting’ project leaders in EVS projects – but this ratio should actually be rather balanced. The still rather small portion of ‘hosting’ project leaders (24%) can be explained by the fact that the contact data for ‘hosting’ project leaders/team members – i.e. of supervisors in hosting organisations – is not necessarily or not easily available in the IT-tools of E+/YiA (see Table 15).

It needs to be mentioned that the number of respondents from some countries is too small to provide for a meaningful comparison with other countries (this is the case for participants, e.g., from Iceland, Liechtenstein and Luxembourg, and even for more countries for project leaders). A comparison might become possible after collecting the RAY data for projects ending in 2019.

The sample of project participants also included participants in activities organised by the National Agencies within the ‘Transnational Cooperation Activities’ (TCA). Project leaders of TCP activities were not invited to take part in the surveys since they are generally employed by the National Agencies and are very frequently involved in these activities, therefore they might become irritated with multiple invitations within each survey.

Around half of the responding participants (52%) were involved in Youth Exchanges (YE), 24% in Youth Worker Mobility projects (YWM), 6% in TCA, 8% in Structured Dialogue projects (SD) and 10% in European Voluntary Projects (EVS) (see Table 8).

64% of the responding project leaders were involved in YE, 13% in YWM, 19% in EVS and 4% in SD projects, thus showing a similar picture but a larger portion involved in YE and EVS and smaller proportion in YWM and SD (see Table 14).

There is a similar gender distribution among responding PP and PL: 65% of responding PP are female, 35% are male and 0.6% indicated ‘other’ (see Table 16); 59% of responding PL are female, 40% male and 0.5% indicated ‘other’ (see Table 48).

As for age, the biggest portion of responding PP was between 21 and 25 years old (33%); 1% was younger than 15 years, 12% were between 15 and 17 years, 21% were between 18 and 20 years, 19% between 26 and 30 years, and 13% older than 30 years – the latter participants in YWM and TCA projects (see Table 17). Responding PL were older, 86% older than 21 years and 58% older than 30 years (see Table 49).

Reliability of responses

The reliability of responses to the RAY surveys in 2017/18 was assessed in a similar way to that of the previous RAY surveys 2015/16, which indicated a high degree of reliability of the responses of participants and project leaders (see Bammer, Fennes & Karsten, 2017). On the one hand, this was done through questions with respect to age, gender and the activity type, for which actual data was

available. The responses of both participants and project leaders showed a high correlation with respect to the actual data.

Moreover, the high discipline of participants and project leaders/team members who to a high degree (between 70% and 75% of those entering the online survey) completed a large part of the questionnaire (see Figure 16, Figure 17) suggests a high degree of reliability of responses – it is rather unlikely that a participant would go through a survey with some 70 questions on 15 pages and fake the responses. This is supported by the time participants spent for completing the questionnaire: most participants took enough time that would have enabled them to answer questions at least selectively; 60% of the participants took enough time to potentially answer all questions.

Nevertheless, also response patterns can be found, which could be questioned, e.g. because the same response option for all items of one question or contradictory responses were selected. On the other hand, in many cases it cannot be verified if the responses reflect the actual opinion of the respondent or not, or if a contradictory response is based on a misunderstanding or not. Therefore, response records were only deleted during the data cleaning process if they were likely to distort the results.

Overall, it can be assumed that most of the data used for the analysis after data cleaning comes from respondents who answered the questions consciously, earnestly and to the best of their knowledge.

1.4 Limitations of the survey

Since the questionnaires and technical procedures were improved compared to the surveys in 2015/16, it can be assumed that the quality of the data and the validity of the results was improved. There were only three new RAY Network partners in the surveys, thus the majority of partners was already more experienced with the RAY procedures. The sampling procedures were further developed, providing for the contact data of more project leaders, in particular of EVS and SD projects. The request to National Agencies to provide contact data of *all* participants and project leaders of *all* projects with an activity end in 2017 should have resulted in a higher degree of the representativeness of participants and project leaders *invited* to the surveys. Nevertheless, there are still some possible reservations concerning the validity of the results:

The representativeness of the response sample with respect to the total population of E+/YiA participants and project leaders could not yet be analysed since the data of the total population could not be retrieved.

While criteria for sampling projects and retrieving the contact data of respective participants had been established, it was not possible to monitor and ensure that these criteria were met. It is likely that there are deviations from sampling standards due to the lack of proper access to the contact data of participants and project leaders due to the complexity of the IT systems where this data is recorded. This could partly be overcome by weighting the different groups of the sample accordingly, which was not yet possible since no data is yet available for the total population.

For some countries and activity types, the samples are rather small or too small for a comparison by country or activity type. This concerns, in particular, project leaders for many countries and, as for activity types, European Voluntary Service and Structured Dialogue projects, in particular for smaller countries (see Table 8, Table 11, Table 14). Therefore, the respective differentiations and comparisons need to be considered with caution.

Furthermore, the sample of respondents is most likely not representative, e.g. with respect to gender and age (female participants are probably overrepresented, older participants are probably overrepresented) – probably due to differences in response behaviour. Possible differences of outcomes should be explored in further analyses and studies.

Further limitations of the surveys in 2017/18 were as follows:

- For most projects, not all participants and project leaders received an invitation to the surveys; in particular, email addresses (necessary for inviting participants and project leaders to take part in the surveys) were missing or incomplete (around 10% for participants and 5% for project leaders; see Table 4, Table 10).
- IT tools for recording the data of project leaders are not coherent. It is quite complicated to retrieve data of project leaders of EVS or Structured Dialogue projects. Therefore, the samples for EVS and SD project leaders are relatively small and analyses of project leader responses differentiated by activity types need to be used with caution.
- Incomplete meta-data provided by RAY Network partners might have resulted in additional missings regarding the differentiation of responses by countries (funding, residence, venue), sending/hosting; gender, age groups etc.
- 21% of the responding project leaders indicated that they had had primarily an organisational function in the project, which means that the basis for responding to some questions could have been limited.
- 80% of the responding project leaders indicated that they had been involved in the project most of the time, and another 12% indicated that they had been involved more than half of the time, which leaves another 7% who might have had a limited basis for responding to the questionnaire.
- Although the invitations to the surveys were very clear about the project the responses should refer to, it is still possible that some participants/project leaders responded with regard to another similar activity, which they had been involved in during the two to ten months before the E+/YiA project they were asked about. Although, this has been taken into consideration in the data-cleaning procedure, this is still possible and might (slightly) distort the outcomes, in particular when differentiating between activity types.

Nevertheless, the quality of the data is much improved compared to the surveys in 2015/16 due to a larger sample size and more funding countries taking part in the surveys.¹¹

Little is known about the technical access of project participants to the online surveys. Nevertheless, it can be assumed that a large proportion of participants and project leaders/team members had access to (broadband) internet in order to participate in the surveys they were invited to (the online survey tool could also be accessed with smart phones). It can be assumed that participants (and – less likely – project leaders) who could not be reached for or participate in this online survey due to inadequate internet access or IT skills come from economically disadvantaged backgrounds. In this case, participants coming from disadvantaged groups, in particular from countries with less developed IT and broadband internet infrastructures, are under-represented in the present data. Furthermore, it is necessary to analyse in how far young people with limited educational background and/or digital competence did not participate in the survey or answered only a limited number of questions. At the same time, it needs to be analysed which proportion of participants and project leaders does not actively use their e-mail accounts since they primarily communicate through social networks, thus not reading the invitations to the online surveys.

¹¹ All Erasmus+ programme countries except Bulgaria participate in this study as funding countries.

Despite these potential obstacles for participants to access the online surveys, online surveys continue to be a method that allows coverage of a geographically widely dispersed target group with a reasonable amount of effort in terms of logistics and investment of personnel and infrastructure.

1.5 Presentation of results

This report outlines the results of the online survey with a focus on the main outcomes. Percentages specified in the text are rounded to the next whole number (exceptionally, for very small percentages, the percentages can include one digit behind the comma). Generally, the tables include total frequencies and percentages by rows or by columns. Modal values might be highlighted in grey. The tables include information on the sample size (N) of project participants (PP; N=23,571) and project leaders (PL; N=5,007). These numbers differ for dependency questions as indicated in the relevant tables. Furthermore, incomplete meta-data provided by RAY Network partners or incomplete responses by participants/project leaders might have resulted in additional missings – thus a smaller N than indicated above – in particular in case of a differentiation of responses by countries (funding, residence, venue), sending/hosting; gender, age groups etc. The tables also include the number of actual responses (n), which might exceed N for questions with multiple response options.

Country-specific analyses are differentiated by the 31 countries or 33 partners of the RAY Network participating in these surveys, either as countries of residence of the participants/project leaders or as funding countries – depending on which criterion is considered to be more meaningful for a differentiation. All other countries – in general other residence countries – are normally summarised under ‘other countries’. Sub-totals might be labelled as “Total RAY”, indicating the sum of values for the 31 RAY countries or 33 RAY partners.

Analyses by ‘activity type’ differentiate between the following types of projects/activities:

- Youth Exchanges (YE; Key Action 1)
- European Voluntary Service (EVS; Key Action 1)
- Structured Dialogue (SD; Key Action 3)
- Mobility of Youth Workers (YWM; Key Action 1)
- Transnational Cooperation Activities (TCA)

In case of cross-tabulations, tables and figures might only show the sum of positive responses (“strongly agree” plus ‘agree’, abbreviated with ‘+/++’) and the respective percentage in order to provide for an easier comprehension of tables and figures.

¹⁵ 'Data cleaning/1' refers to the data cleaning applied to data sets provided to RAY Partners for national analyses. Therefore, N for this sample is bigger than for the sample used for the Transnational Analysis, for which a more rigid data cleaning was performed (see Table 1).

	%	94,3%	89,8%	92,4%	95,9% 93,5%
The network/links with local structures were strengthened	Count	2.430	770	136	511 3.847
	%	88,3%	86,2%	88,9%	90,8% 88,2%

5.6 Effects on local communities

Table 129: Effects on the local communities (PL)

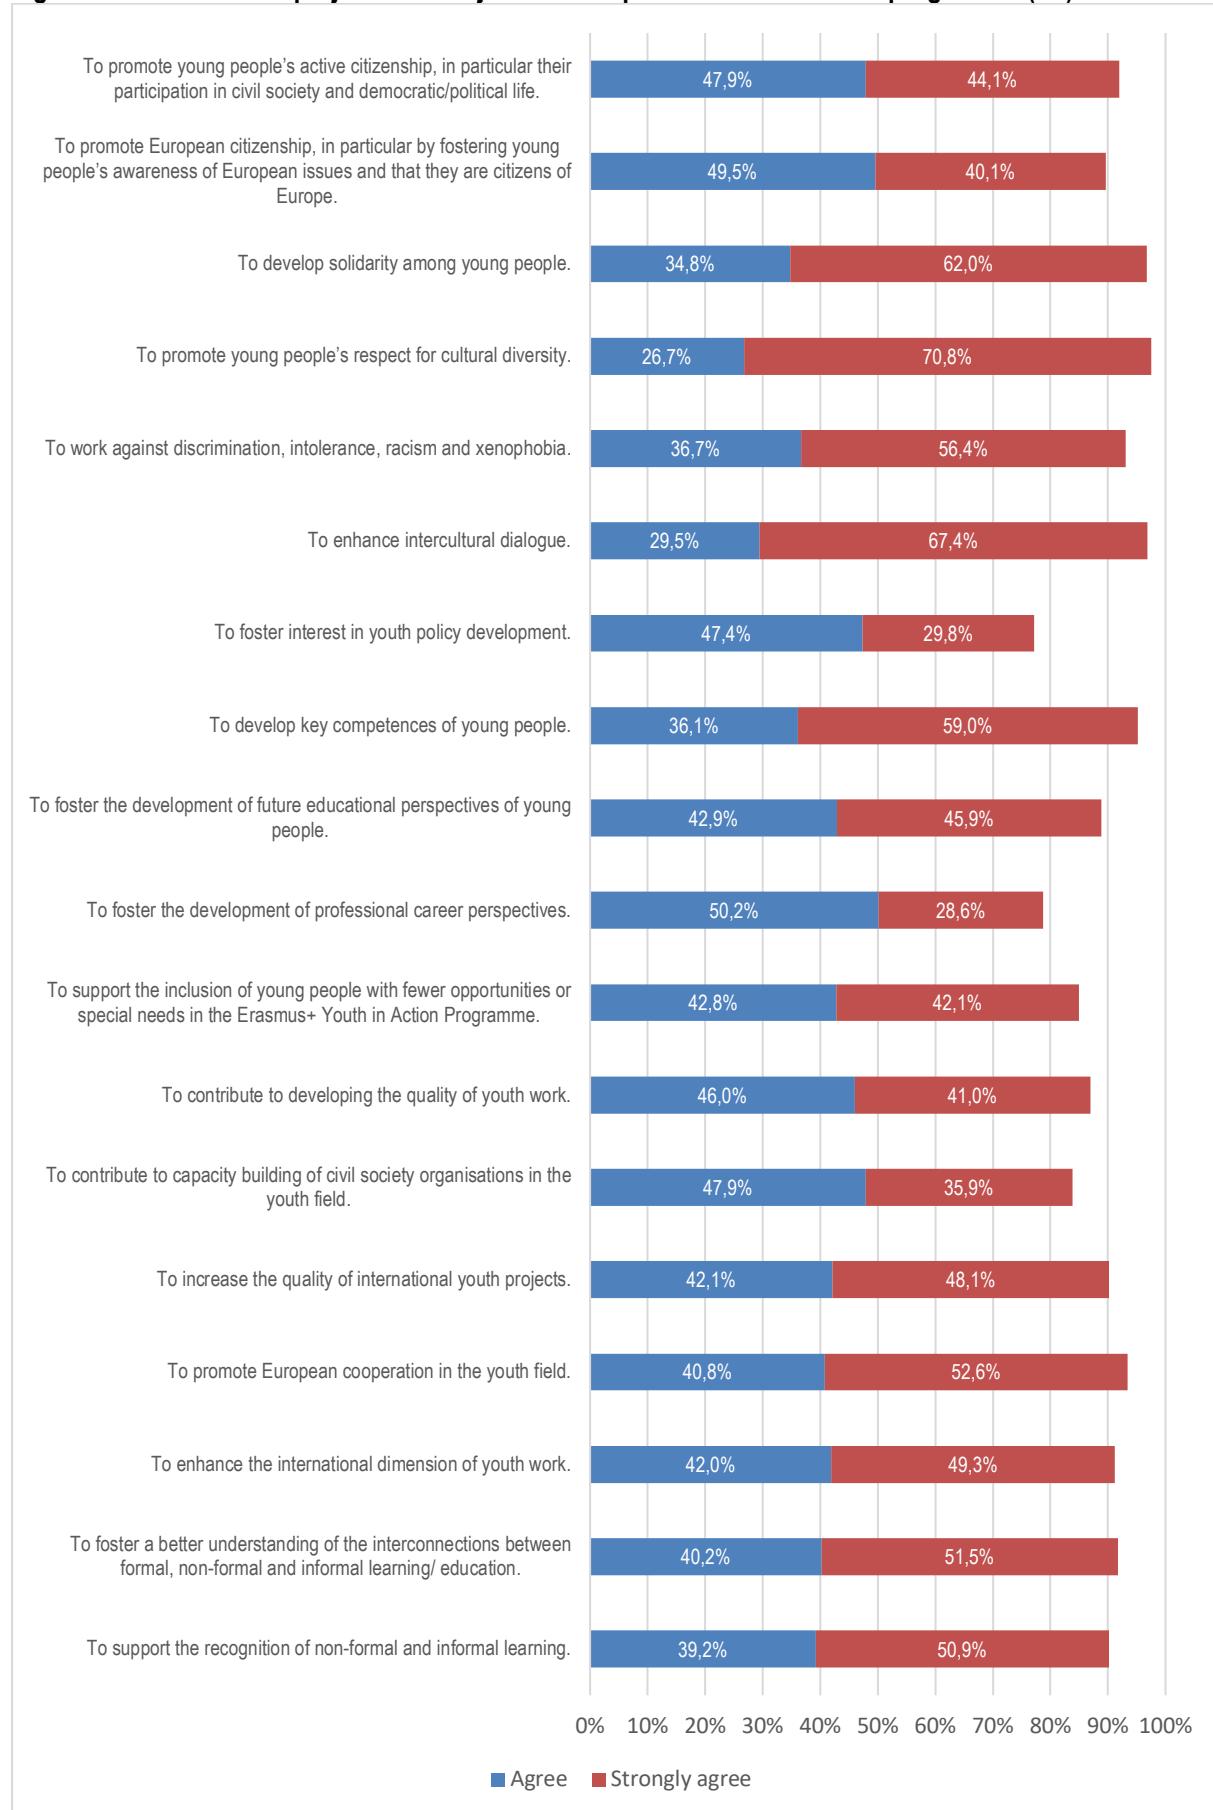

15. Which effects did the project have on the community, in which it was carried out? N=5,007; n=total	strongly disagree		disagree		agree		strongly agree		No opinion / Can't judge		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%	Count	%
The local community was actively involved in the project.	116	2,3%	477	9,6%	2.121	42,9%	1.791	36,2%	441	8,9%	4.946	100,0%
The project was positively perceived by the local community.	61	1,2%	150	3,0%	2.065	41,9%	2.105	42,7%	552	11,2%	4.933	100,0%
The local community has become more aware of the concerns and interests of young people.	95	1,9%	461	9,3%	1.959	39,7%	1.473	29,8%	947	19,2%	4.935	100,0%
The intercultural dimension was appreciated by the local community.	65	1,3%	196	4,0%	1.929	39,1%	2.085	42,3%	657	13,3%	4.932	100,0%
The local community has become more committed to the inclusion of young people with fewer opportunities.	114	2,3%	534	10,8%	1.661	33,7%	1.298	26,4%	1.315	26,7%	4.922	100,0%
The European dimension was received with interest by the local community.	75	1,5%	266	5,4%	1.985	40,3%	1.759	35,7%	840	17,1%	4.925	100,0%
The local community has shown interest in similar projects in the future.	61	1,2%	233	4,7%	1.812	36,8%	1.911	38,8%	912	18,5%	4.929	100,0%
The local community has expressed readiness to support similar activities in the future.	78	1,6%	274	5,6%	1.751	35,5%	1.783	36,2%	1.042	21,1%	4.928	100,0%
The project has created synergies between different stakeholders in the local community.	97	2,0%	339	6,9%	1.725	35,0%	1.681	34,1%	1.083	22,0%	4.925	100,0%

6 Objectives and priorities of E+/YiA

Table 130: Coherence of projects with objectives and priorities of the E+/YiA programme (PL)

7. To what extent do you agree or disagree with the following statements? The project contributed to the following objectives of the Erasmus+ Youth in Action Programme:	strongly disagree		disagree		agree		strongly agree		Total	
	Count	%	Count	%	Count	%	Count	%	Count	%
To promote young people's active citizenship, in particular their participation in civil society and democratic/political life.	79	1,6%	319	6,4%	2.374	47,9%	2.184	44,1%	4.956	100,0%
To promote European citizenship, in particular by fostering young people's awareness of European issues and that they are citizens of Europe.	78	1,6%	433	8,8%	2.442	49,5%	1.976	40,1%	4.929	100,0%
To develop solidarity among young people.	47	0,9%	114	2,3%	1.726	34,8%	3.073	62,0%	4.960	100,0%
To promote young people's respect for cultural diversity.	52	1,0%	69	1,4%	1.325	26,7%	3.510	70,8%	4.956	100,0%
To work against discrimination, intolerance, racism and xenophobia.	68	1,4%	273	5,5%	1.810	36,7%	2.781	56,4%	4.932	100,0%
To enhance intercultural dialogue.	48	1,0%	109	2,2%	1.464	29,5%	3.344	67,4%	4.965	100,0%
To foster interest in youth policy development.	158	3,2%	957	19,6%	2.313	47,4%	1.454	29,8%	4.882	100,0%
To develop key competences of young people.	61	1,2%	178	3,6%	1.793	36,1%	2.928	59,0%	4.960	100,0%
To foster the development of future educational perspectives of young people.	81	1,6%	470	9,5%	2.119	42,9%	2.268	45,9%	4.938	100,0%
To foster the development of professional career perspectives.	118	2,4%	932	18,9%	2.475	50,2%	1.410	28,6%	4.935	100,0%
To support the inclusion of young people with fewer opportunities or special needs in the Erasmus+ Youth in Action Programme.	126	2,5%	621	12,6%	2.118	42,8%	2.083	42,1%	4.948	100,0%
To contribute to developing the quality of youth work.	100	2,0%	545	11,0%	2.277	46,0%	2.027	41,0%	4.949	100,0%
To contribute to capacity building of civil society organisations in the youth field.	121	2,5%	676	13,7%	2.355	47,9%	1.768	35,9%	4.920	100,0%
To increase the quality of international youth projects.	84	1,7%	399	8,1%	2.082	42,1%	2.381	48,1%	4.946	100,0%
To promote European cooperation in the youth field.	62	1,3%	264	5,3%	2.020	40,8%	2.601	52,6%	4.947	100,0%
To enhance the international dimension of youth work.	61	1,2%	371	7,5%	2.067	42,0%	2.428	49,3%	4.927	100,0%
To foster a better understanding of the interconnections between formal, non-formal and informal learning/ education.	68	1,4%	340	6,9%	1.988	40,2%	2.549	51,5%	4.945	100,0%
To support the recognition of non-formal and informal learning.	76	1,5%	412	8,3%	1.942	39,2%	2.523	50,9%	4.953	100,0%
